Notes:

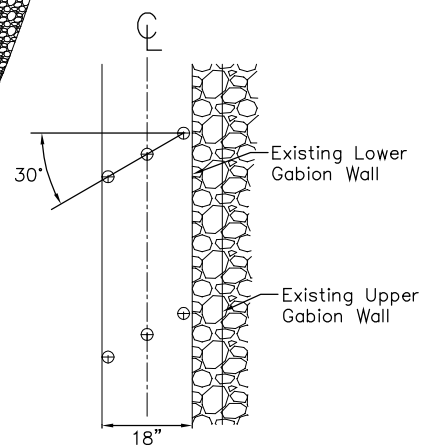

1. Trench will be excavated 18" width along the edge of existing gabion wall. The depth will be 18".
2. 5' Steel T-post will be installed as directed by detail or FS. The depth will be 2' below bottom of the 18" trench.
3. 18" Rip-Rap will be placed in the trench and approximately 18" above as shown in detail.
4. Existing Rock Bar material will be placed on Rip Rap in 6"-8" layer, with the remaining material moved to a storage area designated by the Forest Service located near the Tipsaw Campgrounds.
